# 1. Introduction

## 1-1 Docking Station Overview

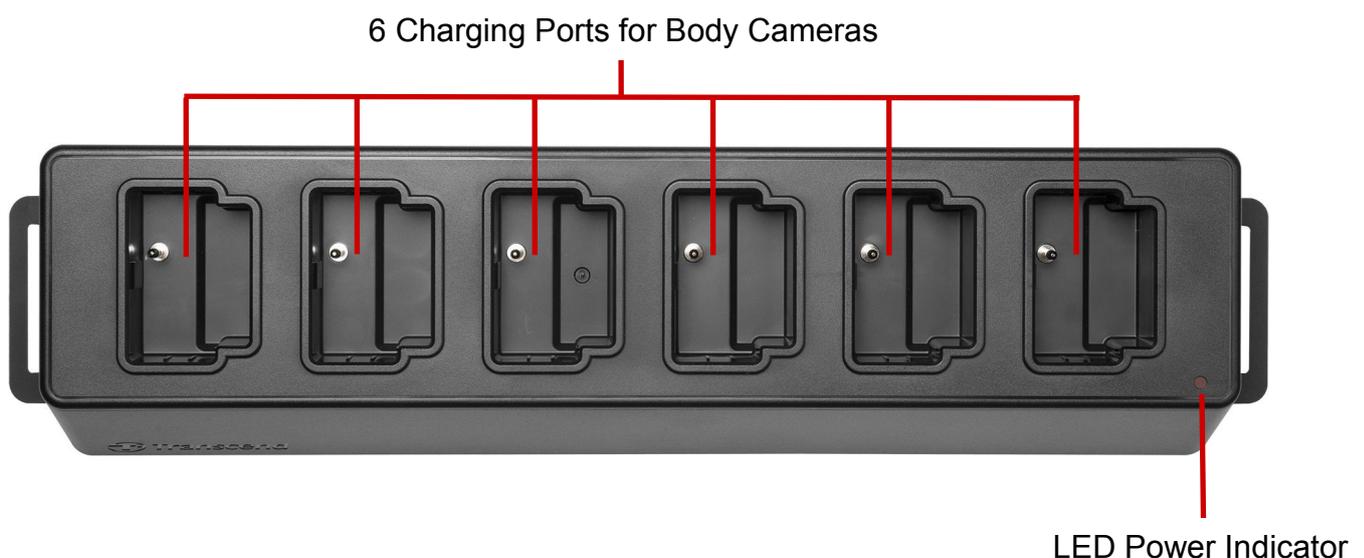

Transcend's DPD6N networked docking station is designed specifically for the DrivePro™ Body 30/60 and offers a complete charging, data upload, and camera management solution. Users are allowed to effortlessly charge multiple DrivePro™ Body 30/60 devices at one go, while files (including video recordings and snapshots) may also be shared to an external storage device via a USB port.

To provide scalability and fast deployment, the docking station is equipped with two Ethernet ports, including a LAN port and a WAN port, as well as one USB 3.0 port, which is backwards compatible with USB 2.0. All ports are located on the right side of the docking station. The LAN port is for administrative setup specifically, using a fixed IP address to ensure that the settings are not at the risk of hackers or invasions from external networks. The WAN port, on the other hand, is for data upload to a designated folder while charging.

### Notice:

1. The USB port can only be connected to an external device, and not with personal computers.
2. For the best security of your data, the WAN port IP, which can be modified, ought not to share the same domain with the LAN port IP, which cannot be modified.
