- Silver-ion antimicrobial technology, reduces the threat of cross-contamination
- Ergonomic design
- Wireless option
- Innovative docking system for automatic charging
- Built-in touchpad
- Compatible with common disinfectants
- Various country layouts available

Statut
Désinfect

The Medi-Key Keyboard is designed to meet the exacting standards of today's healthcare Environment. It is manufactured using hypo-allergenic, latex-free, silicone rubber with a coat of resistant against both chlorine and alcohol-based disinfectants and cleaners.The keyboard can schedule a cleaning cycle based on the amount of use it has had.

Activating the 'disinfect' mode disables the keyboard while cleaning, once the disinfect LED has turned off, the keyboard returns to normal use.

As a proprietary development, a key feature is our ability to fully customise the function of any and all keys, including additional function keys to improve workflow efficiency, ideal for specific applications.

It's unique small form factor means it has a smaller footprint than standard keyboards allowing more room on cart work surfaces. It's built in touch-pad ensures the mouse doesn't wander off when it is needed.

Try 'Hot Switch'

The medi-key wireless has a patent pending function that allow for automatic docking of the keyboard to a dock. Once docked, the previous keyboard will not longer operate. Ideal for removing and replacing the keyboard quickly for remote cleaning.
